About Me

Have fun with my stuff!

For more than 5 years, I have explored my coding skills to the end to pursue website development and the last 3 years I have worked in several institutions in the section of website development, IT division, full-stack development. And since I was in high school, I began to deepen my abilities in the field of computer science, until in the end I often won several National level competitions in the field of computer science or better known as Informatics in my country. I often have fun on the competitive programming platforms codeforces, atcoder, TLX, Vjduges and others. Not infrequently I also take part in National competitions with competitive programming categories and website design :) I do social media content creating too.

Currently I'm studying at Sepuluh Nopember Institute of Technology (ITS), Surabaya, majoring in Artificial Intelligence (A.I) Engineering where I'm being able to do some research about Machine Learning, Deep Learning, Data Mining, Natural Language Processing, Generative A.I, Computer Vision, and etc.

I'm a

- **CEO & Founder of Programming Online Course Platform.**
- **CTO & Founder Indonesia Science Training Institution**
- **Educational Content Creator**
- **Frequently remote working on several education Institutions as a Software Engineer**

My Skills

Competitive Programming

Backend-Development

Dev Ops

Frontend-Development

Graphic & UI/UX Design

+ A.I / ML Engineering Using Pytorch, Tensorflow Keras, ScikitLearn, OpenCV, and Seaborn SNS.

Experiences

Informatics Trainer - Training of Trainer (ToT) Pelatihan Guru Pembina OSN Informatika

Lembaga Olimpiade Pendidikan Indonesia · Part-time

Oct 2024 - Present · 2 mos

Remote

Skills: Competitive Programming · discrete math · Problem Solving · Teaching

GitHub - abdanhafidz/teaching-portfolio

My Projects – Web 3.0 / Software Engineering

Graph Modelling on P2P Block-Chain Network via WebSocket, Referencing to Bitcoin Network

- Creating from Scratch Block-Chain P2P network applying consensus algorithm, decentralization principal, block-chipper, assymetric-encryption, hashing algorithm using SHA-256 + BIPMnemonic + SECPCurve, and Network Broadcasting for Real Time Block Mining using Web Socket Python.
- Solving Graph decentralization & P2P network broadcasting security edge cases : Full node block-chain, Level Ordering, Bipartite Block Forks, Naïve Neirest Neighbour, Backtracking Algorithm, and Byzantine Fault Tolerance (BFT).

RnD Team Project

Transfer Learning – LLM Fine Tuning using LLAMA 3.2 ©Meta 1B on CENDOL V2 Datasets ©IndoNLP for Conversational Tasks via LORA+ and Unsloth.

- Adapt Llama 3.2 for Indonesian: Tailor the capabilities of the Llama 3.2 1B model to accurately understand and generate Indonesian language content.
- Efficient Fine-Tuning with LoRA+: Use the LoRA+ technique to perform resource-efficient transfer learning, reducing computational demands while maintaining model performance.
- Enable Instruction-Tuned Responses: Train the model for specific instruction-based tasks in Indonesian, enhancing its usefulness in real-world applications like customer support, education, and content generation.

RnD Team Project

Language Modelling Chatbot using Markov Model & Bayesian Network

- We developed a chatbot by integrating transfer learning with existing language models, optimizing it for specific tasks using Pytorch. The goal was to enhance the chatbot's conversational capabilities, particularly for Indonesian language contexts.
- The project combines Markov Models for sequence prediction, Bayesian Networks for decision-making, and transfer learning to leverage pre-trained models. This hybrid approach improves the chatbot's response accuracy, adaptability, and contextual understanding, making it efficient even in resource-constrained environments.
